Solution	Ensure that your web server, application server, load balancer, etc. is properly configured to set
Reference	https://www.w3.org/TR/CSP/ https://caniuse.com/#search=content+security+policy https://content-security-policy.com/ https://github.com/HtmlUnit/htmlunit-csp https://developers.google.com/web/fundamentals/security/csp#policy_applies_to_a_wide_variet
CWE Id	693
WASC Id	15
Plugin Id	10055

Medium	Content Security Policy (CSP) Header Not Set
Description	Content Security Policy (CSP) is an added layer of security that helps to detect and mitigate certain types of attacks, including Cross Site Scripting (XSS) and data injection attacks. These attacks are used for everything from data theft to site defacement or distribution of malware. CSP provides a set of standard HTTP headers that allow website owners to declare approved sources of content that browsers should be allowed to load on that page — covered types are JavaScript, CSS, HTML frames, fonts, images and embeddable objects such as Java applets, ActiveX, audio and video files.

Solution	Consider whether or not the component is actually required in production, if it isn't then disable it. If it is then ensure access to it requires appropriate authentication and authorization, or limit exposure to internal systems or specific source IPs, etc.

Solution	Modern Web browsers support the Content-Security-Policy and X-Frame-Options HTTP headers. Ensure one of them is set on all web pages returned by your site/app. If you expect the page to be framed only by pages on your server (e.g. it's part of a FRAMESET) then you'll want to use SAMEORIGIN, otherwise if you never expect the page to be framed, you should use DENY. Alternatively consider implementing Content Security Policy's "frame-ancestors" directive.

Low	X-Content-Type-Options Header Missing
Description	The Anti-MIME-Sniffing header X-Content-Type-Options was not set to 'nosniff'. This allows older versions of Internet Explorer and Chrome to perform MIME-sniffing on the response body, potentially causing the response body to be interpreted and displayed as a content type other than the declared content type. Current (early 2014) and legacy versions of Firefox will use the declared content type (if one is set), rather than performing MIME-sniffing.
URL	https://localhost:4203
Method	GET
Attack	
Evidence	
Other Info	This issue still applies to error type pages (401, 403, 500, etc.) as those pages are often still affected by injection issues, in which case there is still concern for browsers sniffing pages away from their actual content type. At "High" threshold this scan rule will not alert on client

	or server error responses.

Instances	13
Solution	Ensure that the application/web server sets the Content-Type header appropriately, and that it sets the X-Content-Type-Options header to 'nosniff' for all web pages. If possible, ensure that the end user uses a standards-compliant and modern web browser that does not perform MIME-sniffing at all, or that can be directed by the web application /web server to not perform MIME-sniffing.

Attack	
Evidence	sessionToken
Other	The URL contains potentially sensitive information. The following string was found via the pattern

Info	sessionToken
URL	https://localhost:8080/UI/httpSessions/action/setSessionTokenValue/override?apikey=ZAP&session=ZAP&sessionToken=ZAP&site=ZAP&tokenValue=ZAP
Method	GET
Attack	
Evidence	tokenValue
Other Info	The URL contains potentially sensitive information. The following string was found via the pattern tokenValue
URL	https://localhost:8080/UI/httpSessions/view/sessions/override?apikey=ZAP&session=ZAP&site=ZAP
Method	GET
Attack	
Evidence	session
Other Info	The URL contains potentially sensitive information. The following string was found via the pattern session
URL	https://localhost:8080/UI/oast/action/setInteractshOptions/override?apikey=ZAP&authToken=ZAP&pollInSecs=ZAP&server=ZAP
Method	GET
Attack	
Evidence	authToken
Other Info	The URL contains potentially sensitive information. The following string was found via the pattern authToken
URL	https://localhost:8080/UI/spider/action/scanAsUser/override?apikey=ZAP&contextId=ZAP&maxChildren=ZAP&recurse=ZAP&subtreeOnly=ZAP&url=https%3A%2Fzap.example.com&userId=ZAP
Method	GET
Attack	
Evidence	userId
Other Info	The URL contains potentially sensitive information. The following string was found via the pattern userId
Instances	22
Solution	Do not pass sensitive information in URIs.

Plugin Id	10024

Informational	Information Disclosure - Suspicious Comments
Description	The response appears to contain suspicious comments which may help an attacker.
URL	https://localhost:4203/polyfills.js
Method	GET
Attack	
Evidence	user
Other Info	The following pattern was used: \bUSER\b and was detected in likely comment: "//`returnValue` attribute represents the message to show the user. When the event", see evidence field for the suspicious comment/snippet.
Instances	1

Solution	Remove all comments that return information that may help an attacker and fix any underlying problems they refer to.
